

### **Cautionary Statements**

#### Forward-looking statements

This presentation contains "forward-looking statements" and "forward-looking information" (collectively "forward-looking statements") within the meaning of applicable Canadian and United States securities legislation. These include, without limitation, statements with respect to: the Company's 2024 guidance; the timing and amount of expected production from the Las Chispas Operation; the estimation of mine life, mining rates, Mineral Reserves and Mineral Resources, the metallurgical recovery rates, grade, production rate, the costs, and the cash flow generation; the strategic plans, timing and expectations for the Company's current and future development and exploration plans, including but not limited to convert any portion of the Inferred Mineral Resource to economically viable Mineral Reserves; and key considerations for capital allocation. Such forward-looking statements or information are based on a number of assumptions, which may prove to be incorrect. Assumptions have been made regarding, among other things: present and future business strategies, continued commercial operations at Las Chispas, the environment in which the Company will operate in the future, including the price of gold and silver, estimates of capital and operating costs, production estimates, estimates of Mineral Resources and Mineral Resources and metallurgical recoveries and mining operational risk; the reliability of Mineral Resource and Mineral Resources and mining operations in general economic and financial markets; availability of skilled labour; timing and amount of expenditures related to exploration programs; and effects of regulations in general economic and financial markets; availability of skilled labour; timing and amount of expenditures related to exploration programs; programs

#### Cautionary Note to US Investors

This presentation includes Mineral Resource and Mineral Reserve classification terms that comply with reporting standards in Canada and the Mineral Resource and Mineral Reserve Estimates are made in accordance with NI 43-101. NI 43-101 is a rule developed by the Canadian Securities Administrators that establishes standards for all public disclosure an issuer makes of scientific and technical information concerning mineral projects. These standards differ from the requirements of the United States Securities and Exchange Commission (the "SEC") applicable to domestic United States reporting companies. Consequently, Mineral Reserve information included in this presentation may not be comparable to similar information that would generally be disclosed by United States domestic reporting companies subject to the reporting and disclosure requirements of the SEC. Accordingly, information concerning mineral deposits set forth herein may not be comparable with information made public by companies that report in accordance with US standards.

#### Non-GAAP Measures

In this presentation, we refer to measures that are not generally accepted accounting principle ("non-GAAP") financial measures. These measures are widely used in the mining industry as a benchmark for performance, but do not have a standardized meaning as prescribed by IFRS as an indicator of performance, and may differ from methods used by other companies with similar descriptions. Cash costs per silver equivalent ounce ("Cash Costs"), All-in sustaining costs per silver equivalent ounce ("AISC") are non-GAAP financial performance measures which are calculated with reference to the definition published by the World Gold Council and are calculated by the Company as follows: Cash Costs include our production costs, royalties and minesite general and administrative costs. AISC starts with Cash Costs and includes sustaining capital expenditures, general and administrative costs not directly related to the minesite, and reclamation accretion expense. Treasury Assets is also a non-GAAP measure. The Company calculates treasury assets as cash and cash equivalents plus bullion as reported in the consolidated statements of financial position. Management believes that treasury assets provide a useful measure of the Company's most liquid assets that can be used to settle short-term obligations or provide liquidity. Further details on these non-GAAP financial performance measures are disclosed in the MD&A accompanying SilverCrest's financial statements filed periodically on SEDAR+ at www.sec.gov.

#### **Oualified Person**

Under NI 43-101, the Qualified Person for this presentation is N. Eric Fier, CPG, P.Eng. and CEO for SilverCrest Metals Inc., who has reviewed and approved its contents.

#### **Terms of Reference**

Las Chispas Operation Technical Report (or the "Technical Report") - the updated technical report for Las Chispas Operation Technical Report", dated September 5, 2023, with an effective date of July 19, 2023.

Silver Equivalent ("AgEq") is based on an Ag:Au ratio of 79.51:1 calculated using \$1,650/oz Au and \$21/oz Ag, with average metallurgical recoveries of 97.9% Au and 96.7% Ag and 99.9% payable for both Au and Ag. This ratio is applied throughout this presentation to Mineral Resources and Mineral Reserves, production and AISC per oz.

US\$ Basis - all references to \$ are US dollar denominated unless otherwise noted

# A Differentiated Precious Metals Producer

- Low Cost, Resilient Production
- Scarce, High-Quality Project
- Minimally Dilutive Capital Structure
- Ahead of Schedule, Under Budget Construction
- Debt Free within 7 Months of Commercial Production
- Beat 2023 Guidance
- \$105M in Treasury Assets<sup>1</sup> (Cash & Bullion)
- Holding Bullion, Share Buyback Program in Place
- \$12-14M 2024 Exploration Budget

Note: Please review sections titled "Forward-looking statements" on slide 2 which covers the Company's Cautionary Statements (1) Total treasury assets is a non-GAAP measure and includes cash and bullion as of December 31, 2023

# Disciplined Approach to Underground Mining

SilverCrest

Focus on Safety, Predictability and Cost

# Transition to New Underground Contractor

- 5-year Service Contract Awarded to Dumas Top tier international contractor specializing in underground mining with a track record of safety and risk management
- Mobilization Underway Full mobilization to allow for an increase in underground mining rates in Q3, 2024
- Contractor Charges in H1, 2024 Payments related to contractor demobilization and mobilization, including advance for equipment purchases, to be made through Q2, 2024 with majority occurring in Q1, 2024.

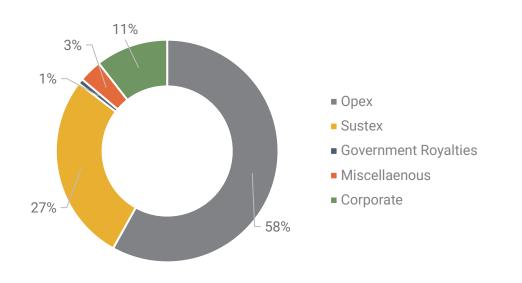

## High-Margin, Low-Cost Production

2024 Corporate Guidance Compares Favourably to Silver Producing Peers

Breakdown of 2024 Corporate AISC Guidance (\$/AgEq oz)

2024E Silver Peer Corporate AISC Estimates (\$/oz AgEq)(1,2)

- > Costs remain low versus silver producing peers 2024 Corporate AISC guidance of \$15.00-\$15.90/oz AgEq positions SilverCrest well below the 2024 silver producing peer average
- > Impacts from Mexican Peso and new mining contractor 2024 guidance incorporates updated Mexican Peso assumptions in line with current levels, as well as transition costs associated with the new underground mining contractor

### Exploration

Focus on Reserve Replacement - Leverage Existing Infrastructure

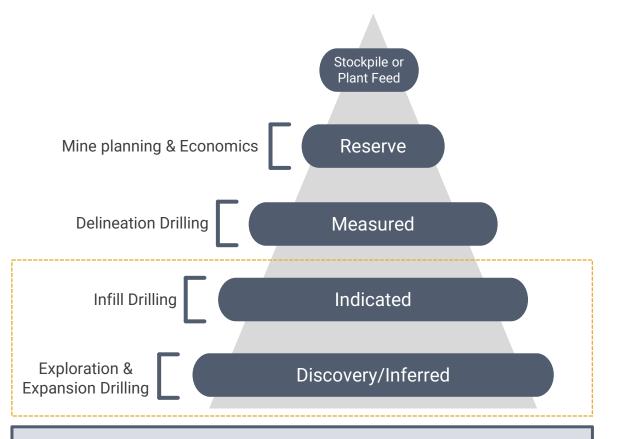

### Convert Discover **Las Chispas** Inferred Resources close Explore new or under to existing infrastructure drilled targets in proximity to current mine

Inferred Resources requiring underground access

Regional Evaluate opportunities

\$12-14M

2024 Exploration Budget

Total number of ounces decrease as they move through the conversion phases being subjected to additional drilling, economics, and other measures of scrutiny

# SilverCrest Advantage

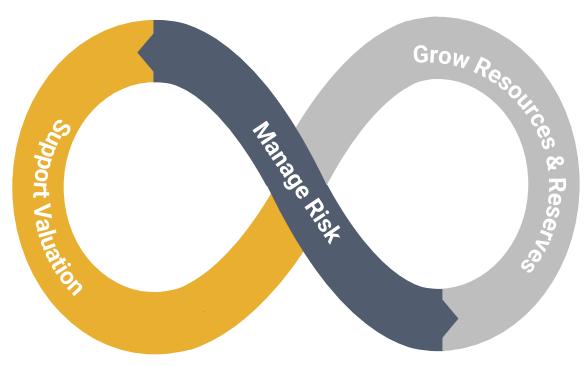

## Capital Allocation Flexibility

Proactively Evaluating Opportunities to Maximize Return and Minimize Risk

### Manage Risk

Maintain Strong Balance Sheet
Ramp-Up Mine
Hold Bullion to Hedge Inflation

### **Support Valuation**

### Mineral Resources

Area	Classification	Tonnes (k)	Au (gpt)	Ag (gpt)	AgEq (gpt)	Contained Au (koz)	Contained Ag (koz)	Contained AgEq (koz)
Babicanora Area Veins	Measured	206.6	13.67	1,289	2,376	90.8	8,561	15,779
	Indicated	1,726.3	7.09	658	1,222	393.6	36,540	67,832
	M&I	1,932.9	7.79	726	1,345	484.3	45,101	83,611
Las Chispas Area Veins	Indicated	441.6	4.22	552	888	60.0	7,835	12,605
Total Undiluted Veins	M&I	2,374.5	7.13	693	1,260	544.3	52,936	96,216
Historical Stockpiles	Indicated	151.8	1.14	112	203	5.6	546	990
Run of Mine ("ROM") Stockpiles	Measured	168.1	5.56	428	869	30.0	2,311	4,699
Total (Veins + stockpiles)	M&I	2,694.4	6.69	644	1,176	579.9	55,794	101,905
Babicanora Area Veins	Inferred	953.5	4.49	267	624	137.5	8,188	19,123
Las Chispas Area Veins	Inferred	373.6	1.81	274	418	21.7	3,296	5,024
Total Undiluted Veins	Inferred	1,327.1	3.73	269	566	159.2	11,484	24,147

#### Notes:

- 1. Mineral Resources that are not Mineral Reserves and do not have demonstrated economic viability.
- 2. The estimate of Mineral Resources may be materially affected by environmental, permitting, legal, title, taxation, socio-political, marketing, or other relevant issues.
- The Inferred Mineral Resource in this estimate has a lower level of confidence than that applied to an Indicated Mineral Resource and must not be converted to a Mineral Reserve. It can be reasonably expected that the majority of the Inferred Mineral Resource could be upgraded to an Indicated Mineral Resource with continued exploration.
- 4. The effective date for M&I Resource estimates of the veins and stockpiles was June 30, 2022, while Inferred Resource estimates for the veins was effective March 31, 2023.
- 5. Mined areas as of June 30, 2022, were removed from the wireframes and block models.
- 6. AgEq is based on Ag:Au ratio of 79.51:1 calculated using \$1,650/oz Au and \$21/oz Ag, with average metallurgical recoveries of 97.9% Au and 96.7% Ag and 99.9% payable for both Au and Ag.
- 7. Mineral Resources are inclusive of the Mineral Reserves.
- All numbers are rounded.
- O. Cut-off grade ("COG") used for In-situ material is 150 gpt AgEq and, for Historical stockpiles is 110 gpt AgEq. No cut-off grade was applied to ROM stockpile as it is based on material mined.

### Mineral Reserves

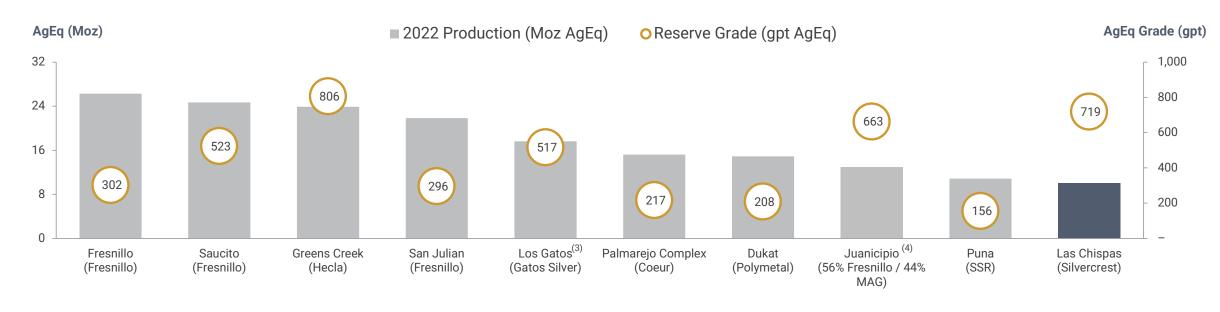

Area	Classification	Tonnes	Au	Ag	AgEq	Contained Au	Contained Ag	Contained AgEq
		(k)	(gpt)	(gpt)	(gpt)	(koz)	(koz)	(koz)
Babicanora	Proven	345	7.03	665	1,224	78	7,382	13,589
Babicanora	Probable	2,334	3.90	370	679	292	27,734	50,987
Las Chispas	Proven	-	-	-	-	-	-	-
Las Chispas	Probable	401	3.09	399	645	40	5,152	8,323
Babicanora + Las Chispas	Proven + Probable	3,081	4.14	407	736	410	40,269	72,899
ROM Stockpile	Proven	168	5.56	428	869	30	2,311	4,699
Hist Stockpile	Proven	150	1.14	112	203	6	541	980
Total Stockpile	Proven	318	3.47	279	555	36	2,852	5,679
Total Mineral Reserve Estimate	Proven + Probable	3,399	4.08	395	719	446	43,121	78,579

#### Notes:

- 1. The effective date of the estimate is June 30, 2022.
- 2. The Mineral Reserve is estimated using the 2019 CIM Estimation of Mineral Reserves & Mineral Reserves Best Practice Guidelines and 2014 CIM Definition Standards for Mineral Resources & Mineral Reserves.
- 3. The Mineral Reserve is estimated with a 372 gpt AgEg fully loaded COG for the deposit and an 85 gpt AgEg Marginal COG for development.
- 4. The Mineral Reserve is estimated using long-term prices of \$1,650/oz for gold and \$21.00/oz for silver.
- 5. A government gold royalty of 0.5% is included in the Mineral Reserve estimates.
- 6. Stockpile values were provided by SilverCrest and account for approximately 7% of mineral reserve ounces.
- 7. The Mineral Reserve is estimated with a maximum mining recovery of 95%, with reductions in select areas based on geotechnical guidelines.
- 8. The Mineral Reserve presented includes both internal and external dilution. The external dilution includes a mining dilution of 0.5 m width on both the hanging wall and footwall for the long hole mining method (1 m total), and a 0.2 m width on both the hanging wall and footwall for the resue mining methods (0.4 m total). Cut-and-fill mining was assumed as breasting in all cases, using the ore sill drive width of 3.3 m as a minimum mining width inclusive of dilution. Additional external dilution was applied in select areas based on geotechnical recommendations. Backfill dilution is also included and represents 4% for the long hole mining method and 7% for cut-and-fill and resue mining methods.
- 9. A minimum mining width of 1.5 m, 3.3 m and 0.5 m was used for the long-hole, cut-and-fill and resue mining methods, respectively.
- 10. Average metallurgical recoveries applied are 97.9% Au and 96.7% Ag.
- 11. The economic viability of the Mineral Reserve has been demonstrated.
- 12. AgEq(gpt) = (Au(gpt) \* 79.51 + Ag(gpt)). AgEq calculations consider metal prices, metallurgical recoveries, Mexican Government gold royalty and tax rate.
- 13. Estimates use metric units (metres (m), tonnes (t), and qpt). Metal contents are presented in troy ounces (metric tonne x grade / 31.103475).
- 14. The independent Qualified Person is not aware of any known environmental, permitting, legal, title-related, taxation, socio-political or marketing issues, or any other relevant issue that could materially affect the Mineral Reserve Estimate.
- 15. Totals may not add due to rounding.

# Only Top 10 Silver Primary Mine 100% Held by a Single Asset Producer<sup>(1)</sup>
